Structural Formulas of Selected Neurotransmitters

Christoph Otte

November 7, 2026

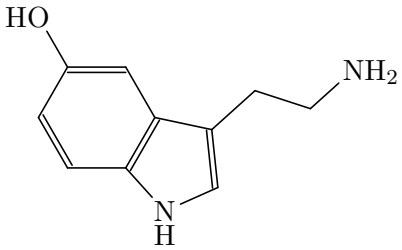

Figure 1: Serotonin is a neurotransmitter involved in mood and sleep regulation.

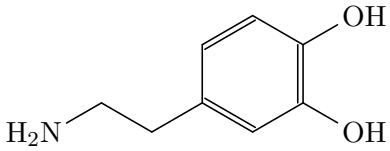

Figure 2: Dopamine is a neurotransmitter involved in movement and reward processing.

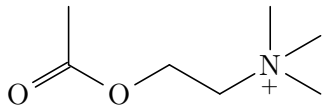

Figure 3: Acetylcholine is a neurotransmitter that enables muscle activation and supports signaling in the nervous system.

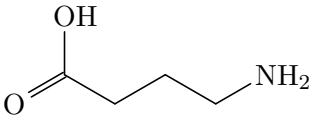

Figure 4: Gamma-aminobutyric acid (GABA) is the main inhibitory neurotransmitter in the brain.

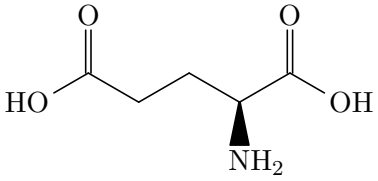

Figure 5: L-Glutamate is the main excitatory neurotransmitter in the brain.

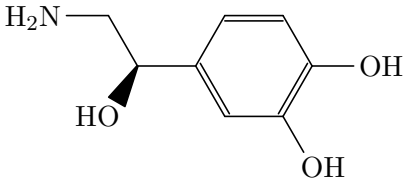

Figure 6: Norepinephrine is a neurotransmitter and hormone involved in alertness and the stress response.

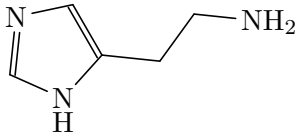

Figure 7: Histamine contributes to immune responses and also acts as a neurotransmitter.
